
The Phragmites in the area south of University Drive and north of the mouth of Little River will be treated with an herbicide shortly after Labor Day.

In 2014, permission was given by landowners to treat the Phragmites located below the ordinary high water mark adjacent to the green highlighted parcels. If you recognize your parcel and don't want it treated, please call 715-732-7780 or email gcleereman@ marinettecounty.com.
